Improving the nutritional value of phytate-containing foodstuffs, using phytase enzymes which catalyze the liberation of inorganic phosphate from Bscherichia coli B; phytase enzyme; anabolic; phytate digestion; nutrition. AAB37892 standard; protein; 440 AA. Escherichia coli B phytase enzyme. 25-MAY-2000; 2000WO-US014846 99US-00318528 (first entry) (DIVE-) DIVERSA CORP. Short JM, Kretz KA; WPI; 2001-112081/12. Escherichia colf. N-PSDB; AAC88885 WO200071728-A1. 25-MAY-1999; the phytates. 07-MAR-2001 30-NOV-2000 AAB37892; AAB37892

The present sequence is a phytase enzyme from Bscherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients Claim 1; Fig 1; 147pp; English.

biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or the production of foodstuffs from livestock. The present sequence is
                                                                                                                                                                                                                                     9

E. coli B phytase.

```
The patent discloses recombinant bacterial phytase from Escherichia colicity 2 appA phytase. The enzyme has phytase activity and improved thermal colorance when compared with wild-type phytase. It has improved protease stability at low ph. The recombinant phytase is useful for improving the cutritional value of phytate-containing foodstuffs and subsequently in the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producting or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of enziromentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed.

The present sequence is B. coll B phytase protein
                                                                                                                                                                      New bacterial phytage for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.

The invention relates to an isolated Escherichia coli polynucleotide encoding a phytase enzyme appearing as ADA19450 and having amino acids modification from W68E, Q84W, A95P, K97C, S168E, R180Y, N226C or Y277D.

Also included the E. coli appa gene ADA1949 (or an oligonucleotide derived from it) or its mutant sequence ADA19452, expression vectors, containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytase enzyme catalyzes containing foodstuff), a method to produce an animal feed containing a microbial phytase (comprising culturing the plant cell, plant part or containing the plant cells, plants or plant into a composition for animal (comprising the plant cells, plants or plant into a composition for animals (comprising the plant seeds, plant cells, plants or plants or an animal able to benefit from (colls, plant parts or plants in admixture with a phytase enzymes (congruising administering to the human or an animal able to benefit from digestive enhancement by the activity of an exogenous phytase enzymes comprising administering to the human or animal the plant seed, plant cells, plant parts or plants of a transgenic plant whose genome contain an expression system which expresses a mucleotide sequence congrain an expression system which expresses a mucleotide sequence comprising a phytase enzyme, a transgenic non-human organism whose genome comprising a betarologous nucleic acid sequence encoding a phytase activity. The phytate enzyme is useful for improving the animal feed and for enhancing digestion in humans and animals. The

invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence represents E. coli B wild-type phytase.

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast. The invention also relates to modified phytase enzyme in the yeast. The invention also relates to stability at low pit. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as suppy, zebrafish, molly, swordtall, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase incorporated in to the daetary aid is safe for animals. The present sequence is Escherichia coli B phytase enzyme.
                                                                                                                                                                                                                                        Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 TWPVKLGWLTPRGGELIAYLGHYQRQRLVADGLLAXKGCPQSGQVAIIADVDERTRKTGE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of the Escherichia coll B phytase. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (AEST5421) derived from the Escherichia coll K-12 appa phytase (AEST5419). The modification of the enzyme, comprising a series of protein. The specification of the enzyme, comprising a series of protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid supplement for preventing muscle cramps; a hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising nutrient englas, and a plant food additive, all comprising nutrient availability in an environment all sample by degrading environmental phytic acid. The novel enzyme is a dietary supplement useful for treating, preventing or reversing osteoporosis or

bone loss, and preventing muscle cramps. The liquid supplement is useful for preventing muscle cramps. The method is useful for reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid, where the environment environment comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of

                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme which has improved thermal tolerance and protease conditied phytase enzyme enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme and fishes, commercially commercially such as plygs, godes, laboratory rodens, commercially significant mammals such as plygs, godes, laboratory rodens, commercially significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially making and baking, in dietary aids for animals. The method provides easy manufacture of the active indietary aids for animals. The present sequence is Eacherichia coli W phytase mutant enzyme. Note: The present sequence is not shown in the specification but has been derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid

Lama2/APPA plasmid translated sequence.

```
The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow cappression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease grability at low pit. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme and fishes, commercially commercial including mammals, fowls and fishes, commercially significant mammals such as plugs, godes, laboratory rodense, commercially significant mammals such as plugs, godes, laboratory rodense, commercially farmed fish such as guppy, zebrafish, molly, swordtail, significant avian species such as chicken, ducks, doves, parrot, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The present sequence is kangaroo rat Bscherichia coli phytase mutant enzyme. Note: The present sequence is not shown in the specification but has been constructed. The present sequence is not shown in the specification but has been constructed.
Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid
                                                                                                                            Disclosure; Page; 74pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet lexcreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Upp on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AFAAGLAPDCAITVHTQADTSSPDPLFNPLKTGVCQLDNANVTDAILSRAGGSIADFTGH 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the B. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Transgenic animal; salivary protein; phytase; phosphorus; animal growth;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides transgenic animals which produce desired

                                                                                                                                                                    Gaps
             proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Upp on 12-SEP-2003 to standardise OS field)
 present invention provides transgenic animals which produce

                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                    (Updated
                                                                                                                                  The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the B. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goate, laboratory rodents, commercially CC significant avian species such as guppy, zebrafish, molly, swordtail, CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase enzyme mutant.

Phytases of the invention is a thermostable protein. They are useful in foodstuffs, for oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also useful in gene therapy and in production of transgenic animals. The present sequence is a Escherichia coli phytase mutant protein which is encoded by appA gene.

The present sequence is that a novel modified phytase derived from the CC Escherichia coli appA protein, with improved thermal tolerance and CC protease stability compared to the wild-type. The present invention CC relates to a novel formulation, comprising at least one polypeptide CC (AEE7542) derived from the Escherichia coli K-12 appA phytase CC (AEE7542). The modification of the enzyme, comprising a series of CC (MEE7542). The modification of the enzyme, comprising a series of CC (MEE75419). The modification of the enzyme, comprising a series of CC mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a CC kit; an immobilized phytase; a fertilizer or soil additive; a liquid CC supplement for preventing muscle cramps; a hydrating agent; a tissue CC culture or cell culture media; and a plant food additive, all comprising CC the novel phytase, and a method of reducing pollution and increasing CC nutrient availability in an environment or environmental sample by CC degrading environmental phytic acid. The novel enzyme is a dietary complement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         13-AUG-1997;

The method is useful for reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid, where the environment or environmental sample comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of phytate rich ingredients.

                                                                                                        S
                                                                                                                                           밁
                                                                                                                                                                         Ś
                                                                                                                                                                                                                 먉
                                                                                                                                                                                                                                                                                                                                                           The invention discloses a new isolated or recombinant nucleic acid which ce encodes a polypeptide having a phytase activity. Also claimed is a compose of the nucleic acid, a vector comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic composition of a phytase message in a cell, a heterodimer comprising the translation of caid, a hybridoma comprising immobilised polypeptide or nucleic acid, a hybridoma comprising an antibody that specifically binds to the colypeptide, a food supplement for an animal, an edible enzyme delivery carrier, an edible pellet comprising a granule edible carrier and the colypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, making an anti-phytase antibody, producing a recombinant colypeptide, determining whether a compound binds to the polypeptide, determining whether a compound binds to the polypeptide, contifying a modulator, whole cell engineering of new or modified composition and processing of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a digestive system and processing of corn and sorghum kernels. The phytase activity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or cash and in phytate digestion. The sequence presented is the modified
                                                                                                                                                                                                                                                                                       Matches 432;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
The patent discloses recombinant bacterial phytase from Escherichia coli Kl2 appA phytase. The enzyme has phytase activity and improved thermal tolerance when compared with wild-type phytase. It has improved protease stability at low pH. The recombinant phytase is useful for improving the nutritional value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are
                                                                                                                                                                                                                                        New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Misc-difference
